SYMBOLS

SIGNES CONVENTIONNELS

The following standard symbols are used in Statistics Canada of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer,
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.

This is the second issue on livestock in the Handbook of Agricultural Statistics series, and deals with numbers on farms, values, output and disposal, production and disappearance, slaughterings, prices and marketings. The series start from the earliest year for which records are available. The last year included is 1973. The main purpose of this Handbook is to provide in one volume historical series of livestock statistics for Canada and the provinces. The Canada totals do not include Newfoundland or the Territories.

Latest estimates will be available from the regular reports of the Livestock Estimating Section as they are published during the year.

All inventory and output figures for the years 1971-73 are subject to revision following the 1976 Census results.

Livestock estimates for Newfoundland for the census years are included in Tables 86, 87 and 88.

The official livestock statistics are obtained from various sources and these are:

(1) The Census of Agriculture.

- (2) Estimates based on mail questionnaire sample surveys undertaken by the Agriculture Division of Statistics Canada cooperating with statistical offices of provincial departments.
- (3) Other government departments including the Federal and Provincial Departments of Agriculture which make available much statistical information to Statistics Canada.
- (4) Other divisions of Statistics Canada also provide data pertaining to the processing of and trade in agricultural commodities.

Estimates of meat production and per capita disappearance are available on a national basis only, because interprovincial movements of livestock and meats, as well as export and import statistics cannot be specifically tied down to a province of origin or province of destination basis.

Lard estimates include the lard used in margarine and in shortening.

Farm output. - As given in Tables 31, 32, 57, and 78 is derived from semi-annual, livestock survey, supply-disposition balance sheets drawn up in the Agriculture Division, Statistics Canada. In these balance sheets beginning inventory plus births (pigs saved in the case of pigs) give total supply. From this is subtracted ending inventory and death loss leaving farm output. Farm kill for own use and for sale is deducted to leave total live sales of which commercial marketings are a recorded quantity. The final residual (the "other" or "non-commercial" sales figure) contains uninspected slaughter and embodies also the cumulative errors from estimating inventories, births, deaths, farm-kill and off-farm sales. These sampling errors are the cause of the year-to-year fluctuations as found in the "Other" item of the tables mentioned above.

Farm value per head. — Of livestock is the average value for all classes and grades for that kind of livestock.

Rounding. - Has been to the nearest thousand and where totals may not balance exactly with the sum of the components this is due to rounding. Farm values per head have been rounded to the nearest dollar.

The present volume was produced in the Agriculture Division, Livestock and Animal Products Section by Miss Lillian Felske.

SYLVIA OSTRY, Chief Statistician of Canada.

PRÉFACE

La présente livraison sur le bétail est la deuxième de la série du Guide de la statistique agricole; elle traite du nombre d'animaux dans les fermes, des valeurs, des rendements et de la distribution, de la production et de la consommation, de l'abattage, des prix et des mises en marché. La série commence avec la première année pour laquelle nous disposons de chiffres. La dernière année comprise est 1973. L'objectif principal de ce guide est de fournir sous une même couverture la série chronologique de la statistique du bétail pour le Canada et les provinces. Terre-Neuve ou les Territoires du Nord-est ne sont pas inclus dans les totaux pour le Canada.

On pourra obtenir les dernières estimations en consultant les rapports réguliers de la Section de l'estimation du bétail au fur et à mesure qu'elles paraîtront au cours de l'année.

Tous les chiffres sur le stock et le rendement pour les années 1971-1973 sont sujets à révision par suite du recensement de 1976.

Les estimations du bétail pour Terre-Neuve pour les années de recensement sont comprises dans les tableaux 86, 87 et 88.

Les statistiques officielles sur le bétail proviennent des diverses sources suivantes:

(1) Le rencensement de l'agriculture.

- (2) Les estimations basées sur les enquêtes-échantillon par questionnaires postaux entreprises par la Division de l'agriculture de Statistique Canada en collaboration avec les bureaux de statistique des ministères provinciaux
- (3) D'autres ministères gouvernementaux, y compris les ministères fédéral et provinciaux de l'Agriculture qui fournissent de nombreux renseignements statistiques à Statistique Canada.
- (4) D'autres divisions de Statistique Canada fournissent aussi des données relatives au traitement et au commerce des marchandises agricoles.

Les estimations de la production de viande et de la disparition par personne ne sont disponibles qu'au niveau national, parce que les mouvements interprovinciaux du bétail et des viandes, de même que les statistiques sur les exportations et les importations, ne peuvent pas être reliés spécifiquement à une province d'origine ou à une province de destination.

Les estimations de saindoux comprennent le saindoux utilisé dans la fabrication de la margarine et de la graisse végétale.

Le rendement agricole. - Présenté aux tableaux 31, 32, 57 et 78 est tiré des feuilles de bilan ressources et emplois de l'enquête semestrielle sur le bétail, établies à la Division de l'agriculture de Statistique Canada. Ces feuilles de bilan comprenant le stock de départ plus les naissances (les porcelets réchappés dans le cas des porcs) nous donnent l'approvisionnement total. On soustrait de ce total le stock de la fin et la perte en animaux morts pour obtenir le rendement agricole. L'abattage sur la ferme pour autoconsommation et pour la vente est déduit pour obtenir l'ensemble des ventes d'animaux vivants dont les ventes commerciales forment une quantité enregistrée. Le reste final (les chiffres de vente de la case "autre" ou "non commerciale") comprend les abattages non inspectés et les erreurs cumulatives des estimations de stock, de naissances, de morts, d'abattage sur la ferme et des ventes hors de la ferme. Ces erreurs d'échantillonnage expliquent les variations d'une année à l'autre comme on le voit au poste "autre" des tableaux susmentionnés.

La valeur agricole par tête. - De bétail est la valeur moyenne pour toutes les classes et catégories de ce genre de bétail.

On a arrondi au millier près. - C'est pourquoi les totaux ne balancent pas toujours avec la somme des composantes. Les valeurs agricoles par tête ont été arrondies au dollar près.

Cette publication a été faite à la Division de l'agriculture, Section du bétail et des produits d'origine animale par Mlle Lillian Felske.

Le statisticien en chef du Canada, SYLVIA OSTRY

(1) See Preface for explanation Voir l'explication à la préface. (2)	Commercial marketing	ngs for each prov	ince, except Ont.	ario, represent th	e net movement.

⁽¹⁾ See Preface for explanation. — Voir l'explication à la préface. (2) Commercial marketings for each province, except Ontario, represent the net movement, i.e. the total outward movement to public stockyards, direct to packing plants, direct on export and to country points in other provinces, less cattle returned to country points (inward movement). For Ontario, commercial marketings are total outward movement off farms to stockyards and plants etc., less the inward movement from stockyards and plants of animals of Ontario origin only. Data obtained from Health of Animals Branch, Department of Agriculture. — Les ventes commerciales de chaque province, sauf celles de l'Ontario représentent le mouvement net, c'est-à-dire l'ensemble des expéditions extérieures, vers les parcs à bestiaux publics, directement vers les salaisons, directement à l'exportation, à des points de campagne dans d'autres provinces, moins les bovins retournés dans les points de campagne (expéditions intérieures). En Ontario, les ventes commerciales sont l'ensemble des expéditions extérieures depuis les fermes jusqu'aux parcs à bestiaux et aux salaisons, etc., moins les expéditions intérieures depuis les parcs à bestiaux et les salaisons d'animaux en provenance de l'Ontario seulement. Ces données ont été fournies par la Direction de l'hygiène vétérinaire, ministère de l'Agriculture.

1) See Preface for explanation. — Voir l'explication à la préface. (2) Co	61.8	2.5	3.6	32.3	23.4

⁽¹⁾ See Preface for explanation. — Voir l'explication à la préface. (2) Commercial marketings for each province, except Ontario, represent the not movement, i.e. the total outward movement to public stockyards, direct to packing plants, direct on export and to country points in other provinces, less calves returned to country points (inward movement). For Ontario, commercial marketings are total outward movement off farms to stockyards and plants etc., less the inward movement from stockyards and plants of stocker calves of Ontario origin only. Data obtained from Health of Animals Branch, Department of Agriculture. Les ventes commerciales de chaque province, sauf celles de l'Ontario représentent le mouvement net, c'est-à-dire l'ensemble des expéditions extérieures, vers les parcs à bestiaux publics, directement vers les salaisons, directement à l'exportation, à des points de campagne dans d'autres provinces, moins les veaux retournés dans les points de campagne (expéditions intérieures). En Ontario, les ventes commerciales sont l'ensemble des expéditions extérieures depuis les fermes jusqu'aux parcs à bestiaux et aux salaisons, etc., moins les expéditions intérieures depuis les parcs à bestiaux et les salaisons d'animaux en provenance de l'Ontario seulement. Ces données ont été fournies par la Direction de l'hygiène vétérinaire, ministère de l'Agriculture.

⁽¹⁾ Cradings on a dressed carcass basis from October 1940 to date, previously on a live basis (Select and Select Bacon) — Classés par poids abattu habillé d'octobre 1940 jusqu'à maintenant, et par poids vivant auparavant (Choix et bacon de choix).

(2) From 1940 to Sept. 1959 the prices quoted are for the Grade Bl and from Oct. 1959 to date Crade B. To obtain Crade A prices between October 1940 and March 1954, add 40 cents; from April 1954, add 85 cents, and from May 1954 to 1968 add \$1.00. — De 1940 à septembre 1959, les prix relevés se rapportent à la Classe BI et depuis octobre 1959, à la Classe B. Pour obtenir les prix de la Classe A entre octobre 1940 et mars 1954, ajouter 40 cents; à partir d'avril 1954, ajouter 85 cents, et de mai 1954 jusqu'à maintenant, ajouter \$1.

(3) Hogs, Dressed, Index 100. — Porcs habillés, indice 100.

Note: The hog-barley ratio is the number of bushels of No. 1 feed barley required to equal the value of 100 pounds Grade B (live) hogs, both prices at Winnipeg.

Commencing in January 1969 the ratio is based on the number of bushels of No. 1 Feed Barley equivalent in price to the value of 100 pounds of Index 100

live hog. The long-time average ratio (1913-1949, 1930 omitted due to extreme abnormality) was 18.3. The average ratio 1939-1949 was 20.4 and for 1951

to 1960 it was 20.0 — Nota: Le rapport de l'orge aux porcs est le nombre de boisseaux d'orge de provende de première qualité équivalant à 100 livres de

porc (poids vivants) de classe B, les deux prix étant relevés à Winnipeg. Deputs janvier 1969, le ratio est fondé sur le nombre de boisseaux d'orge

fourragère nº 1 dont le prix est équivalent à la valeur de 100 livres de porc vivant, l'indice étant établi à 100. La moyenne à long terme du rapport

(de 1913 à 1949, l'année 1930 étant omise à cause de son anormalité excessive) est 18.3. La moyenne de 1939-1949 est 20.4 et celle de 1951-1960, 20.0.

⁽¹⁾ See Preface for explanation. — Voir l'explication à la préface. (2) Commercial marketings for each province, except Ontario, represent the net movement, i.e. total outward movement to public stockyards, direct to packing plants, direct on export and to country points in other provinces less sheep returned to country points, (inward movement) For Ontario, commercial marketings are total outward movement of farms to stockyards and plants, etc., less the inward movement from stockyards and plants of animals of Ontario origin only. Data obtained from Health of Animals Branch, Department of Agriculture. — Les ventes commerciales de chaque province, sauf celles de l'Ontario, représentent le mouvement net, c'est-à-dire l'ensemble des expéditions extérieures, vers les parcs à bestiaux publics, directement vers les salaisons, directement à l'exportation, à des points de campagne dans d'autres provinces, moins les moutons retournés dans les points de campagne (expéditions intérieures). En Ontario, les ventes commerciales sont l'ensemble des expéditions extérieures depuis les fermes jusqu'aux parcs à bestiaux et les salaisons d'animaux en provenance de l'Ontario seulement. Ces données ont été fournies par la Direction de l'hygiène vétérinaire, Agriculture Canada.
